Django

- project creation: django-admin startproject project_name
- cd to the new project folder to create new app
- app creation : python manage.py startapp app_name
- run project: python manage.py runserver   (it works when executed from the folder which have manage.py)

after creating app:

☐ **goto app → views and do**
- from django.http import HttpResponse
- create function

       def index(request):

           return HttpResponse("hello world")

☐ **goto urls.py**
- from app1 import views
- **add** path('',views.index,name='index'), **in url patters**

☐ **goto settings → installed apps add the app name**

☐ **run python manage.py runserver**
